

SAFESTEP

PASS DOOR PARTS AND KITS

TWO THOUSAND EIGHTEEN

Convenient pedestrian entry

A pass door is convenient. You do not need to open the full overhead door if you only want to walk into the building. And with that, a pass door is energy efficient.

Since the introduction of **SAFESTEP**, our proven “pass door system for finger-safe door panels with integrated low threshold”, we have upgraded and improved the system to what it is today. Our system allows customers to build a pass door that features a solid construction, very small tolerances and a very good appearance, on the inside and outside of the door. The latter is important, given the, often residential application of these pass doors where curb appeal is a major factor.

The **SAFESTEP** system consists of separate parts and profiles, with which a complete pass door can be composed and assembled. And, FlexiForce now offers the convenience of standard kits in multiple variations.

SAFESTEP is available in two versions:

- For doors $W < 3.000$ mm, **SAFESTEP** offers a low threshold combined with a top reinforcement profile, allowing a full door height pass door!
- For doors $W > 3.000$ mm, **SAFESTEP** provides a reinforcement strut on the top panel in which the top of the pass door is cut out.

A full range of accessories like a panic bar, door closers and safety switches complete the **SAFESTEP** offer.

SAFESTEP features:

- Smooth design
- Integrated, non-visible hinges
- Convenience of low threshold
- Strong construction, fits perfectly
- Door opens to outside
- CE-Initial Type Testing Report
- Convenient kits

Convenient ready Kits

The convenience of not doing all cutting and assembling of pass door parts by yourself, comes available with our pre-assembled **SAFESTEP** Kits! Cutting and milling pass door profiles for fingersafe sections is a precise job. FlexiForce has the production volume and machinery to do that for you! For different panel brands, panel heights, threshold versions, left or right opening and in the colour/finish that you demand. As standard catalogue item, from stock!

FlexiForce creates a box in which you will find all the cut profiles, plastic caps, hinges, brackets, screws, etc. We now offer in our catalogue different standard kits. Or configure your kit with the table below. The article code explains the configuration:

SS- -KIT -

Panel brand:

- KE Kingspan/Epcu
- M Metecno/Tecsedo/etc.

Panel heights:

- 1 4 x 500mm
- 2 1 x 610mm, 3 x 500mm
- ... See kit overview

Kit version:

- A 840mm, 1-piece threshold
- B 840mm, 2-piece threshold
- C 1040mm, 1-piece threshold
- D 1040mm, 2-piece threshold

Door direction:

- L Left hand opening
- R Right hand opening

Finish:

- ALU Anodized aluminum
- #### Any RAL code
